

Description:

The purpose of this workflow, is to create an NSX-T Cloud Connector. To do this it requires the following configuration:

- NSX-T Credential Object
- vCenter Credential Object
- Create NSX-T Cloud Object
- Create vCenter Connection Object
- If required, create MGMT Segment Pool
- If required, create Data Segment Pool

This Workflow Allows for the Creation of an NSX-T Cloud with no Data Segments specified. This can be used in conjunction with the Avi NSX-T Cloud - Add Data Segment Workflow to assign Data segments as a separate operation.
