

vRO - AVI Cluster Upgrade

Description:
The purpose of this workflow, is to upgrade an AVI Cluster. We offer the following 3 Upgrade paths:
• Base Image Upgrade Only
• Patch Image Upgrade Only
• Base and Patch Image Upgrade
The Workflow will retrieve the backup configuration, and save it to a file on the vRO Appliance.
Depending on the SE Error Response selection, the Workflow will either:
• Monitor the upgrade and will NOT fail on upgrade error of Service Engines. After all SEs have either been successfully upgraded or encountered a failure, the Workflow will output all of the SE names, Upgrade Percentage and state. This will provide the end user with the required information to resolve any upgrade issue.
• Monitor the upgrade and FAIL the Workflow on any SE upgrade error. The Workflow will output all of the SE names, Upgrade Percentage and state. This will provide the end user with the required information to resolve any upgrade issue.
If the Controller Cluster encounters an issue during the upgrade, the Workflow WILL end and provide the Cluster Upgrade status failure information.
